☹ ☹ ☹

Who is this for?

Any one who cares about privacy

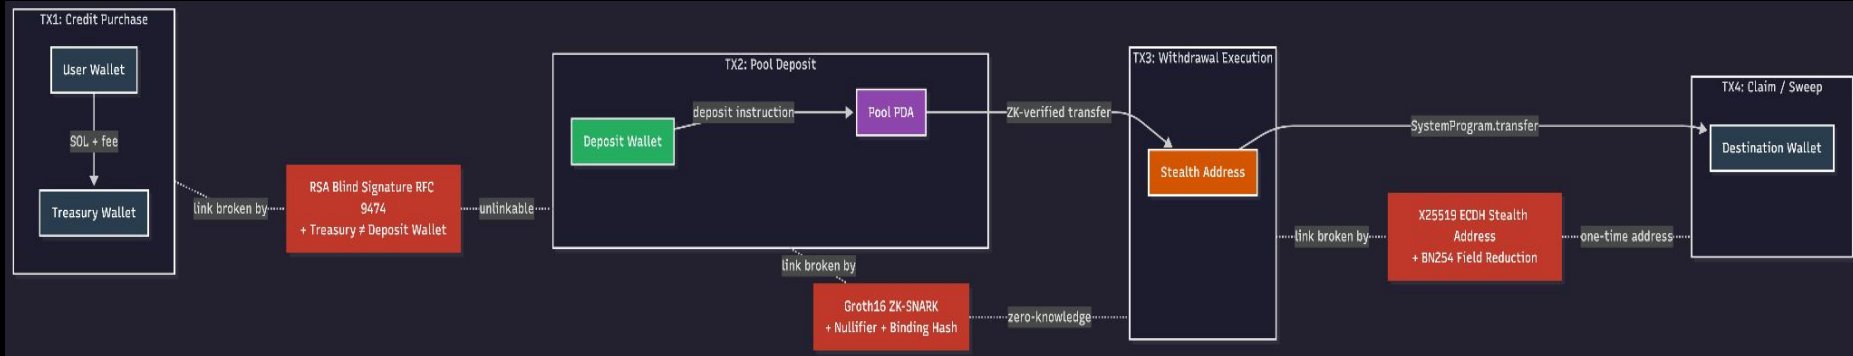

Problem:

Blockchain is Transparent and that's a security nightmare, anyone on the network can see

- Fee Payers - Who paid for the transaction
- Signers - Who authorised the transaction
- Account Interactions - Which accounts were touched
- Timing - When the transaction occurred
- Amount - How much was transferred

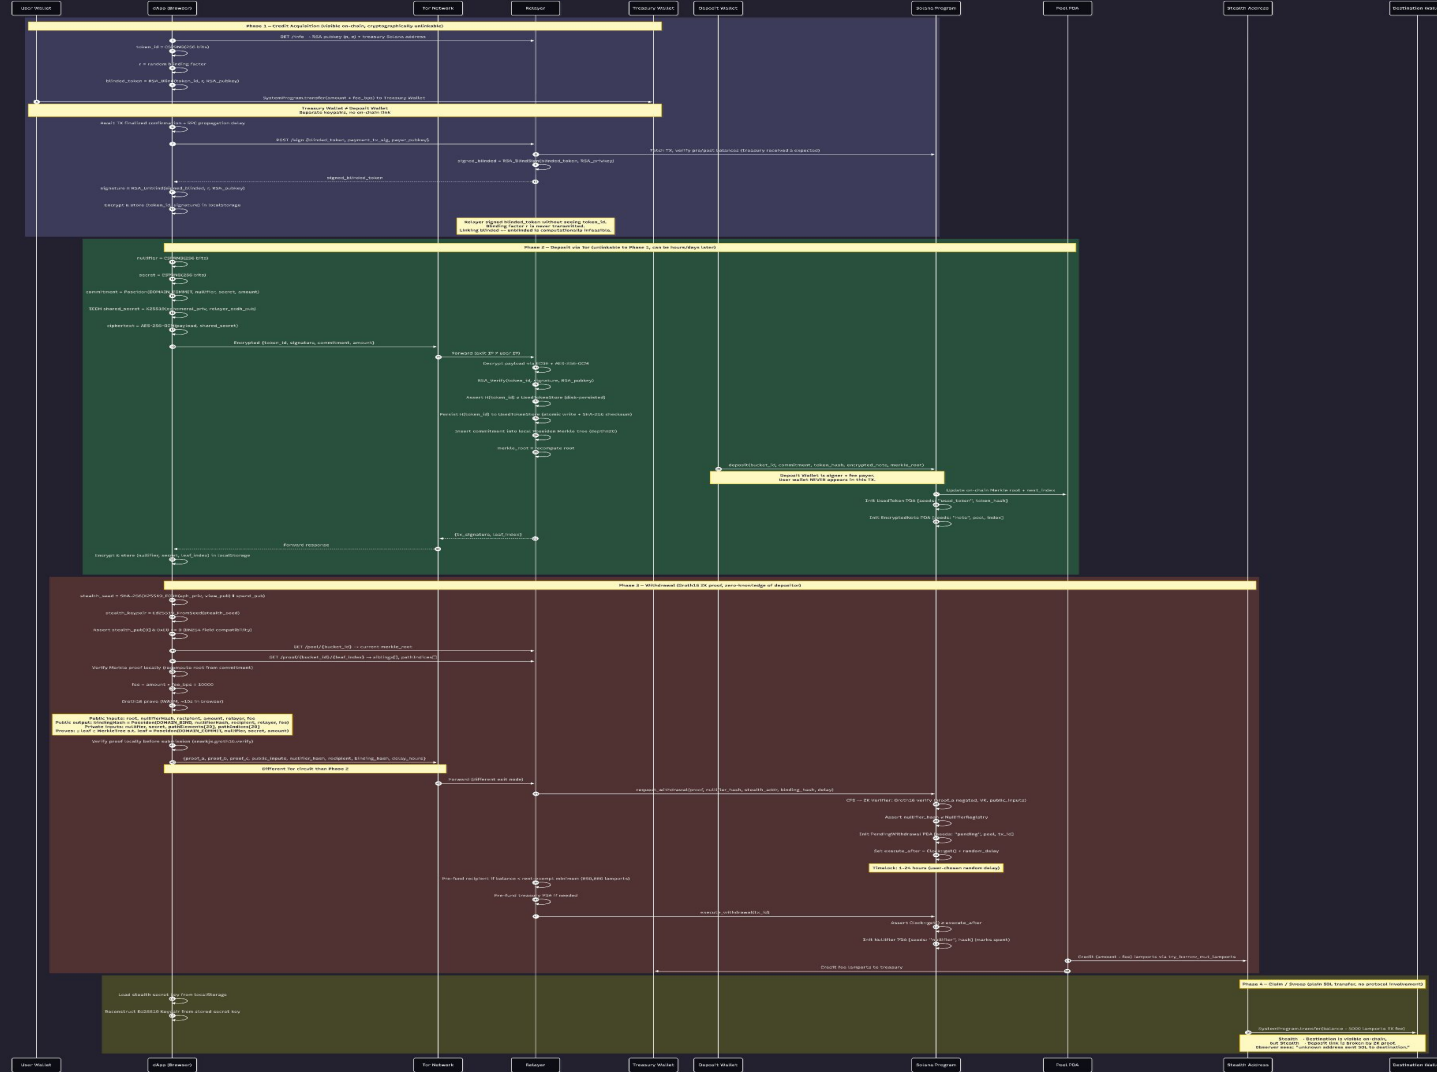

10,000 feet view Architecture:

Used Zk Snarks for backend verification, WASM for frontend verification (tanstack Start)

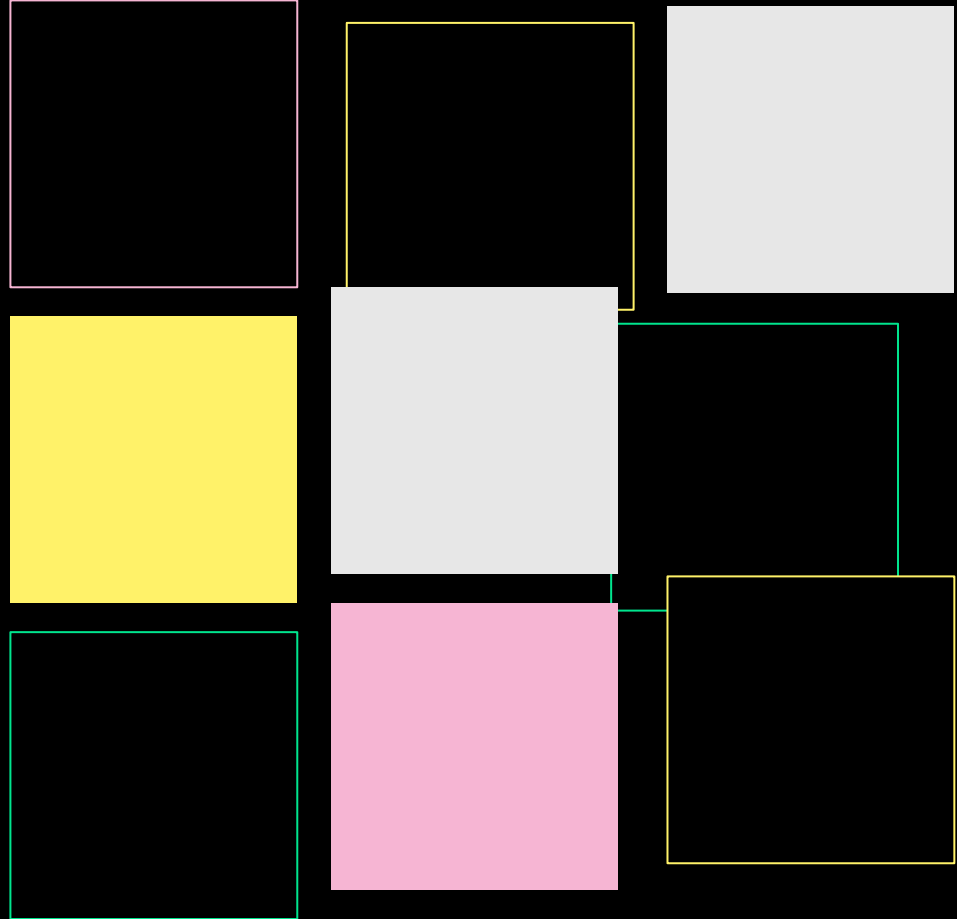

A black and white line drawing of a man's face. He has a large, round head, a high forehead with several horizontal lines, and a wide-eyed, surprised expression. He is wearing thick-rimmed glasses. His nose is large and prominent. His mouth is wide open in a large, dark, irregular shape, suggesting he is shouting or speaking loudly. He has a full, textured beard and mustache. The drawing is done in a simple, sketchy style with bold lines.

TEAM:

1. Sadiq (Me)

...that's it, only me

Thank You
